

## About the webinar

Research is a systematic investigation aiming at the discovery and interpretation of facts to increase the stock of knowledge. It also helps in rethinking and revision of accepted theories or laws in the light of new facts. Scientific research is important to build knowledge and improve the quality of lives. The European research council (ERC) has agreements with a number of different countries to allow young researchers to pursue research in Europe. The funding agencies in Europe offer a wide range of support to young scientists around the world.

Therefore, the goal of this webinar is to create awareness of the broad array of career opportunities in scientific research available to students, research scholars and faculty members in European countries.
